

Introduction to Breadboards

1. Illustration of a breadboard:

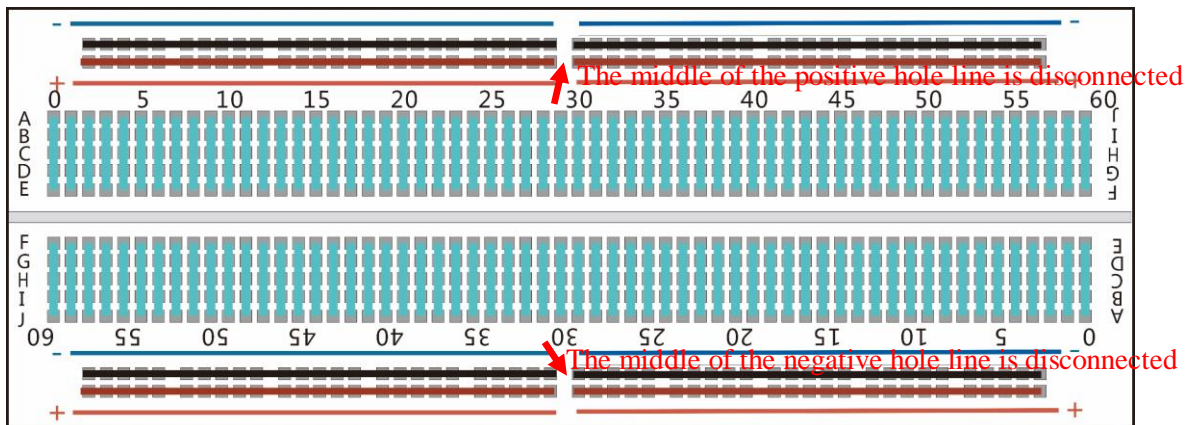

We have two kinds of breadboards, the difference is that the two lines of holes in the positive and negative terminals are disconnected or connected in the middle.

When you receive the product, please note which type of breadboard is in your hand, Thanks!

Internal Anatomy

Instructions:

As shown in the figure above, three colored lines are used on the breadboard to represent the relationship between holes and holes. The holes on a connecting line indicate that they are connected, and the holes between different lines are not connected.
